

Cyber Security Awareness for Executives

Description

The executive training course will help executives learn more about what you can do to identify, assess and manage cyber risk in order to help protect your organization's information. Axon's team is experienced in delivering executive and operator cyber security training to different sectors, including governments and large financial institutions, in Europe, the Gulf and USA. The success of the initiative is dependent upon appropriate support and participation from various individual executives across different sectors, especially at the C-Suite Level. We routinely see that executive level support for cyber security is a prerequisite for the success of a cyber security program.
